

Power Modules

Application Specific Power Modules (ASPM®)

ASPM Concept: Your Circuit in a Module

Microsemi's Power Modules makes it easy to tailor a module solution to meet your specific requirements. You can choose a semi-custom solution based on a standard power module. Changes from a standard module may include: choice of substrate material, base plate material, power semiconductors, plastic lids, different terminals, and custom markings; all with no redesign costs. Lead times are typically very short because the piece parts are stocked items.

If your application requires a truly unique solution, then you can choose to have Microsemi design and manufacture a full-custom module for you, an Application Specific Power Module (ASPM®). Our technical staff mechanical and electrical engineers with extensive experience in power systems design and application. We can help you during the development phase of your product.

The ASPM is designed to meet 100% of the customer needs. It provides the customer with a unique solution.
