Microsemi Corp:
Semicoa Acquisition and Subsequent
Product Responsibilities

Sehr geehrte(r) Dame, Herr,

über folgende Mitteilung von Microsemi Corp. möchten wir Sie in Kenntnis setzen:

Change is constant and in that light, I am pleased to share with you the exciting news that Microsemi Corp. has finalized the acquisition of Semicoa Corporation.

We are excited about the announcement as the acquisition of Semicoa brings together a wide array of Hi Reliability solutions geared toward the design and development of small signal and power transistors for high-reliability military/aerospace and commercial markets.

For almost 40 years Microsemi has specialized in the manufacturing of discrete silicon semiconductors focusing on small signal transistors and this acquisition will complete our line of standard products and complement our line of custom components such as our Rad Hard Power Management line.

This Product line (Semicoa Backlog) will move to our Lawrence Division. Our Lawrence facility has achieved the highest U.S. government qualification (JANS, MIL-PRF-19500, Space Level) for the production of electronic components and is also ISO9001, and AS9100 certified. The modern manufacturing facility performs discrete and hybrid assembly utilizing innovative techniques and high end process technology.

Most all of the Product that you currently have on backlog with Semicoa will initially be transferred to our Lawrence Facility. Ultimately much of this product line will transfer to Ireland.

Thank you for your continued support as we start this exciting new chapter in our relationship with you.

Für Rückfragen stehen wir Ihnen jederzeit gerne zur Verfügung.

Mit freundlichen Grüßen

Hermann Lindbüchl
